

Domino's Pizza, Inc. No Deforestation Commitment & Policy

Introduction

At Domino's Pizza, Inc. ("Domino's," "we," "us" or "our"), as a food company, the topic of land use within our sourcing practices is of importance for a range of reasons and we recognize that working to eliminate deforestation and preserving natural ecosystems are essential as we work towards meeting our climate goals. To drive positive outcomes, we are focused on commodities with a high risk of deforestation and where we believe we can make a meaningful impact.

Commitment and Scope

In alignment with Forest, Land, & Agriculture (FLAG) Guidance from the Science Based Targets Initiative (SBTi), Domino's commits to no-deforestation¹ across its primary deforestation-linked commodities, with a target date of December 31, 2025. Domino's has determined that our primary deforestation-linked commodities are: palm oil in our dough, soybean oil in our dough, beef in our pizza toppings and timber and wood fiber in our primary food-contact packaging (pizza boxes, corrugated liners, and parchment paper liners).

- Excluded, at this time, from these primary deforestation-linked commodities are:
 - Ingredients within purchased final products including palm oil, soybean oil, or cocoa embedded in products and remaining timber and wood fiber-based products not explicitly mentioned above
 - Embedded soy in animal feed and any other deforestation-linked commodities within our extended supply chain
- For the commodities excluded from this initial target, Domino's is continuing to work across our supply chain to achieve greater levels of visibility and accountability, by employing supplier surveys and conducting risk mapping

Requirements

Domino's values suppliers that share our values and will uphold our deforestation commitment. Suppliers are expected to provide documentation as evidence of their conformity with this Policy and commitment. Domino's expects all suppliers of primary deforestation-linked commodities, as described above, to comply with this Policy through at least one of the following compliance methods:

1. Source from a country not defined as "high-risk" for the relevant deforestation-linked commodity²³
2. Have and maintain a no-deforestation policy that aligns with the SBTi and the Accountability Framework Initiative (AFi) that encompasses the deforestation-linked commodity or product supplied to Domino's
3. Obtain certification from a certification scheme which provides credible deforestation-free assurance for the deforestation-linked commodity or product supplied to Domino's⁴
4. Other programmatic pathway as mutually agreed by supplier and Domino's

The cut-off date applicable to this commitment, which is the date after which deforestation became non-compliant in our supply chains for suppliers related to all primary deforestation-linked commodities covered under this Policy is December 31, 2020. We expect our suppliers to maintain alignment with this cut-off date.

¹ As defined by Accountability Framework Initiative (AFi), deforestation is the loss of natural forest as a result of conversion to agriculture or other non-forest land use; conversion to a plantation; or severe or sustained degradation.

² High-risk sourcing countries as defined by: [WWF Deforestation Fronts Full Report \(2021\)](#); [WRI Estimating the Role of Seven Commodities in Agriculture-Linked Deforestation \(2020\)](#). Countries other than these, from which Domino's sources, are considered low risk for deforestation, considering WRI (2020) and WWF (2021).

³ In cases where birth country data is unavailable for beef, and the country of slaughter is not classified as high-risk, Domino's accepts country of slaughter as a proxy for birth origin.

⁴ For list of credible Certification Schemes, please refer to "Annex 2: Allowable certification schemes providing DCF assurance" (pg 37): [Time for Transparency: Deforestation- and Conversion-Free Supply Chains](#)
